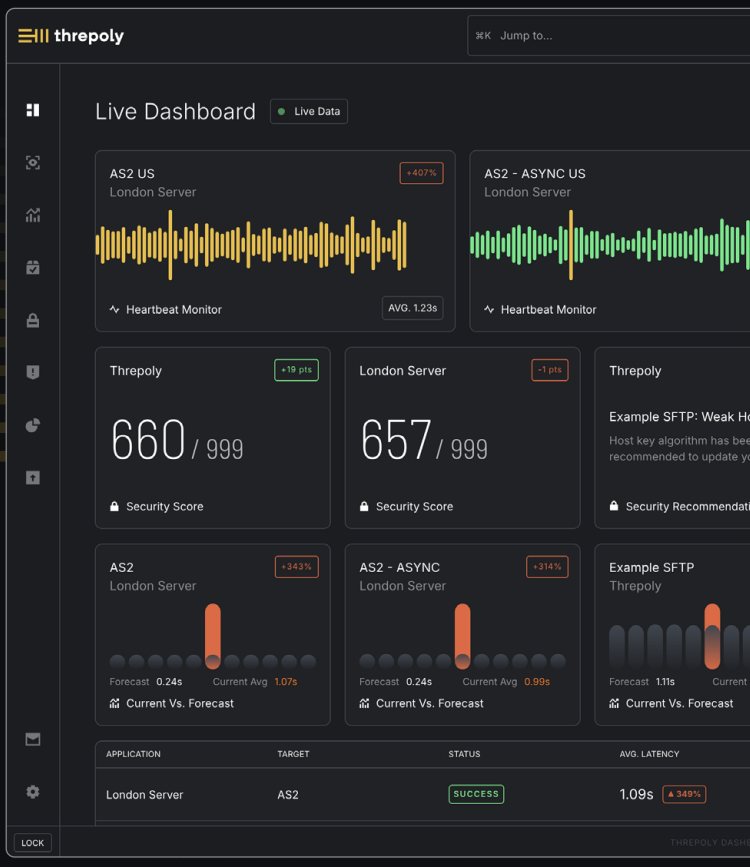
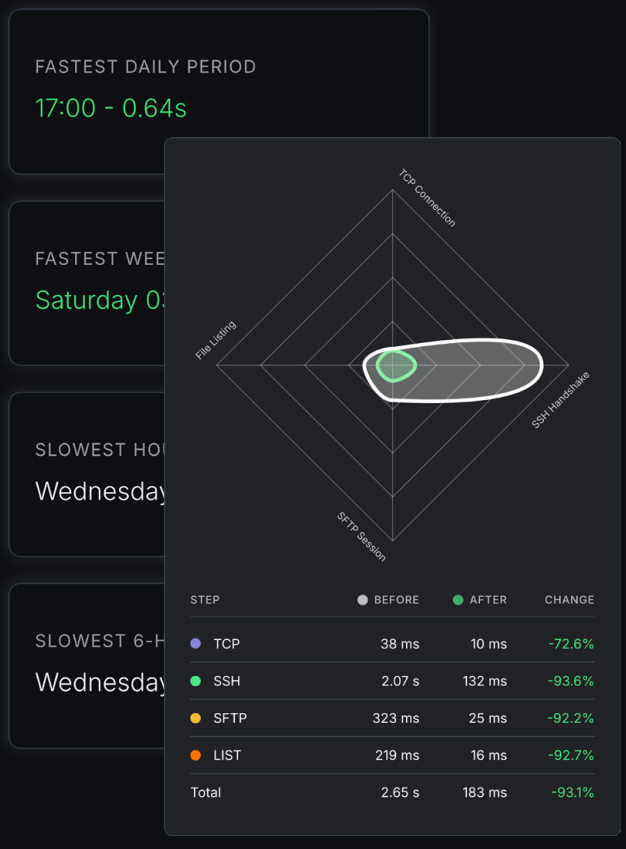
DATA TRANSFER VISIBILITY

Never be blindsided or surprised by an outage or service degradation again.



File and Data Transfer software is responsible for moving vast quantities of data around the World each day. Everything from financial transactions to complex logistics to national security, are reliant on technology which when is unavailable, puts your business on hold, costing you money and harming reputation.

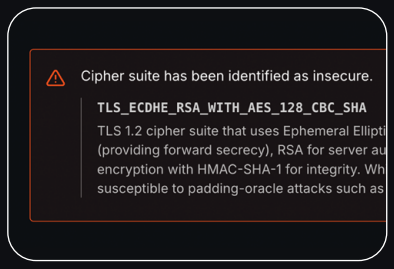


Threpoly is an innovative cloud-based solution, which provides proactive performance and security monitoring for SFTP, FTPS, HTTPS, and AS2 targets. Putting you back in control and remaining always open for business.

- Never be the last to know about slow-downs and outages.
- Immediately identify problematic connections, speeding up diagnosis and correction.
- Always be aware of the security posture of your data transfer solution.
- See the impact of changes in your environment post patch, upgrade or configuration.
- Proactively predict scalability needs to support business growth.
- Report accurate SLAs and up-time statistics to stakeholders.

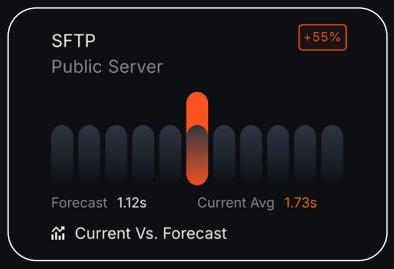
Outages Put Your Business on Hold

Every Second Costs... Every Failed Connection Affects Reputation



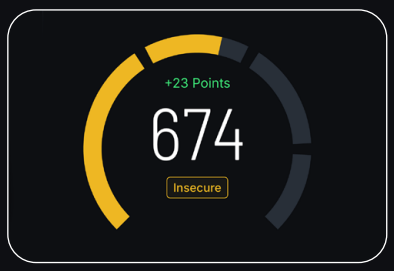
Algorithm & Cipher Vulnerabilities

Threpoly inspects the KEX, encryption algorithms, HMACs and any authentication keys/certs for known weaknesses and vulnerabilities.



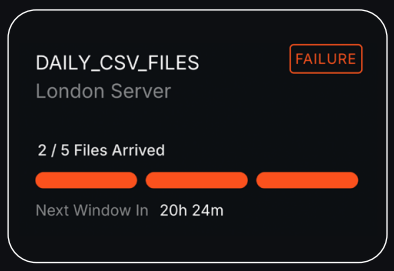
Congestion Forecasting

Based on historical patterns, Threpoly can identify areas of frequent congestion, to assist with better resource allocation and planning.



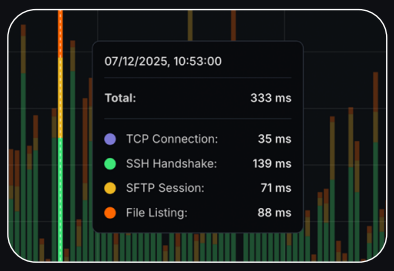
Security Health Assessment

Threpoly assesses performance, ciphers, authentication, solution version to provide an overall score, with recommended improvements.



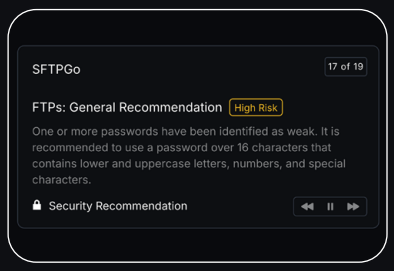
File SLA Monitoring

Threpoly monitors for the arrival of critical files, ensuring onward services and third-parties get the files they need, at a time they are expecting them.



Live Performance Monitor

Threpoly analyses the stages of connection, giving you visibility of service availability, upload/download speed and where any issues may lie.



Actionable Insights & Alerting

Threpoly provides recommendations for improvement and alerting across all its measured metrics, including outages and slow-downs.
